AKONNECTS / SPEAKER BRIEF

Dr Aman Kapoor

Digital health, AI adoption, learning and strategic communication

Founder of AKonnects, bringing 23+ years across clinical practice, healthcare technology, learning and communication. His focus is the work between buying a solution and making it useful: workflow, trust, capability and measurable value.

Signature topic territories

Why Bought Is Not Adopted - identify the friction between procurement, launch and repeat use.
AI Adoption in Healthcare - define the task, context, human review and value before scaling output.
Learning Systems that Change Behaviour - connect enablement, reinforcement and working practice.
Education as Adoption Infrastructure - connect expert communication with trust, engagement and the next useful action.

Audience and outcomes

For healthcare leadership teams, digital-health and AI teams, L&D leaders, professional associations and communication teams. Sessions can help participants name adoption barriers, identify accountable roles and frame a practical next experiment. Outcomes and examples are agreed with the organiser.

Formats to discuss

A 30-minute keynote, a 45-minute talk with questions, a 60-minute interactive leadership session, or a moderated panel. These are scoping options, not a fixed booking or availability commitment. The audience, format, duration, preparation, travel and commercial terms are agreed before confirmation.

Inspect the communication style and thinking

Podcast portfolio and selected episodes - samples of hosting and communication, not recordings of the proposed keynote.
AI in Practice - inspectable internal work and a synthetic demonstration.
23+ Years at the Intersections - selected career context.
